C Alternative Projection Scenario: 2006 to 2026	49

I. EXECUTIVE SUMMARY

This report presents population projections for Manitoba during the period 2006 - 2026. Two series of population projections (labelled MAIN and ALTERNATIVE) are presented, based on the 2006 preliminary population estimate and recent demographic information on births, deaths, and migration. The two scenarios assume:

- (1) Manitoba's total fertility rate (TFR) will remain constant at 1.80 for the duration of the projection period in both scenarios.
- (2) Net international migration increases to 10,300 by 2009 and then increases by 1,000 every two years for the remainder of the projection period in the MAIN scenario.

For the ALTERNATIVE scenario, a constant level of 9,300 net international migration is achieved by 2009.

- (3) Net interprovincial migration moderates to -3,500 by 2011 in both scenarios.
- (4) The life expectancy at birth increasing by 0.9 years for females and by 1.8 years for males in both scenarios.

A summary of the projections is:

Year (July 1)	MANITOBA POPULATION		MEDIAN AGE (YEARS)	
	Main	Alternative	Main	Alternative
2001	1,151.3	1,151.3	36.4	36.4
2004	1,170.5	1,170.5	37.0	37.0
2005	1,174.1	1,174.1	37.2	37.2
2006	1,177.8	1,177.8	37.3	37.3
2011	1,213.7	1,211.7	37.9	38.0
2016	1,276.3	1,259.9	38.0	38.3
2021	1,352.7	1,308.5	38.3	38.8
2026	1,441.0	1,353.9	38.6	39.5

Note: Data for 2001, 2004, 2005 and 2006 are Statistics Canada estimates. Data for 2011, 2016, 2021 and 2026 are projected.

Under the MAIN projection scenario, Manitoba's population of 1,177,765 in 2006 will increase to 1,441,000 by July 1, 2026. This represents an average annual increase of 1.0% or 13,200 persons per year. Between 2006 and 2017, the population is projected to rise, adding 112,600 persons in 11 years for average annual growth of 0.8% or 10,200 persons per year. From 2017 to 2026, the population is projected to grow at a faster pace, from 1,290,400 in 2017 to 1,441,000 in 2026 for an average annual increase of 1.2% or 16,700 persons per year.

The ALTERNATIVE scenario is projected to have an average annual increase of 0.7% or 8,800 persons per year

II. HIGHLIGHTS FROM THE MANITOBA POPULATION PROJECTIONS: 2006 TO 2026

The Next 10 Years: 2006 to 2017

- The population is projected to increase by 9.5% over the next ten years, from 1,177,800 in 2006 to 1,290,400 in 2017.
- On an annual average basis, the population is projected to grow by 0.8% per year between 2006 and 2017 which is approximately 10,200 persons per year.
- Net international migration is expected to grow by over 55% in the next ten years and will amount to 13,400 persons in 2017. Population growth will total 15,100 in 2017 and net international migration will comprise nearly 90.0% of this growth.
- International immigrants are projected to reach 15,000 by 2017. Immigration is projected to rise steadily over the entire projection period, and in the first ten years it is expected to increase by 69.0%.
- Losses due to interprovincial migration are projected to diminish. Net interprovincial losses are projected to reach 3,500 by 2011 where they will remain constant over the entire projection period.
- Natural increase (births minus deaths) is expected to grow over the next ten years. Natural increase will reach 4,300 persons by 2017, up from the 2006 level of 3,500.
- Older adult population expected to grow more quickly than the other age groups. The number of people aged 65 and over is expected to grow by 22.3% between 2006 and 2017. This compares to increases of 3.6% and 8.7% for 0 to 14 year-olds and 15 to 64 year-olds, respectively.
- Male population aged 65 and over is projected to grow faster than the corresponding female population. Between 2006 and 2017, the number of men 65 and over will increase by 27.4%, this compares to growth of 18.4% for women.
- As a result of changing age distribution, the median age of population will increase 0.8 years, from 37.3 in 2006 to 38.1 in 2017.

The Next 20 Years: 2006 to 2026

- Manitoba's population is expected to be 1,441,000 by July 1, 2026 for total growth of 22.5%.
- On an annual average basis, the population is projected to grow by 1.0% per year over the entire projection period.
- The population is expected to grow more rapidly in the last ten years of the projection period. From 2017 to 2026 the average annual growth rate is 1.2%.

- Net international migration will account for over 80% of population growth by the end of the projection period. By 2026 it is expected to reach 17,400, which is more than double the 2006 level of 8,600.
- International immigrants are expected to reach record levels. Immigration is projected to increase steadily over the entire projection period, from 8,884 in 2005/06 to 19,000 in 2025/26 for growth of nearly 115%.
- Natural increase (births minus deaths) will decline in the last ten years of the projection period. After reaching a high 4,300, natural increase is expected to decrease to 3,800 persons by 2026.
- Older adult population expected to grow at a faster rate over the entire projection period. The number of people aged 65 and over is expected to grow by over 55.0%. This compares to growth rates of 17.4% for 0 to 14 year-olds and 16.9% for 15 to 64 year-olds.
- Growth of male population aged 65 and over outpaces similar female population. Over the entire projection period, males aged 65 and over are expected to grow by 65.7% while the same female population is expected to grow by 49.1%
- Children (0 to 14) will make strong gains in latter half of projection period. This population is expected to grow by 3.6% between 2006 and 2017. From 2017 to 2026 however, total growth is expected to be 13.3%.
- The median age of population will increase 1.3 years over the next twenty years, from 37.3 in 2006 to 38.6 in 2026.
- The median age increases by 0.5 years between 2017 and 2026 which is less than in the first 10 years. This is mainly due to the gains made by the 0 to 14 year-old population in the last half of the period.

Table 1: Manitoba Estimated and Projected Population and Components

Year (July 1)	Population	Births	Deaths	Net Interprovincial Migration	Net International Migration
2001	1,151,285	13,746	9,720	-4,344	4,617
2004	1,170,475	13,864	10,096	-7,227	7,132
2005	1,174,148	13,915	10,226	-8,635	8,563
2006	1,177,765	13,941	10,478	-7,769	9,473
2011	1,213,697	14,681	11,001	-3,500	11,300
2016	1,276,345	15,705	11,484	-3,500	13,300
2021	1,352,661	16,261	12,058	-3,500	16,300
2026	1,441,008	16,703	12,892	-3,500	18,300

December 2006

III. INTRODUCTION

This set of population projections for the Province of Manitoba has been developed in consultation with the Demographic Statistics Committee. This committee, chaired by the Manitoba Bureau of Statistics, is composed of representatives from seven other departments and agencies of the Manitoba government:

- i) Advanced Education and Training
- ii) Family Services and Housing
- iii) Health
- iv) Competitiveness, Training and Trade
- v) Labour and Immigration
- vi) Manitoba Hydro
- vii) Finance

The Demographic Statistics Committee reviewed draft projections and adopted the MAIN scenario.

For the purpose of these projections, it should be noted that the MAIN scenario is considered the most likely set of conditions. The ALTERNATIVE scenario is for comparison purposes. It has been included to demonstrate the effect of the international migration component in the MAIN scenario on population growth.

The projections in this report are based on the 2006 preliminary population estimate for Manitoba of 1,177,765, adjusted for an estimate of census undercoverage, non-permanent residents and Returning Canadians and are meant to replace the Manitoba level population projections produced in December, 2004.

Projections are not forecasts but are based on what would occur if the stated assumptions hold true. As the process of change is cumulative, the reliability of the projection may decrease over time. For example, precisely projecting the number of international immigrants and the volumes of persons moving between provinces is a difficult process. Predicting the age profile of migrants is also subject to error.

The Manitoba Bureau of Statistics reviews these population projections annually. Revisions will be made when necessary.

Appendix A provides Manitoba's demographic change by population component for 1971 to 2006. Appendices B and C of this report present the MAIN and ALTERNATIVE scenarios in both graphical and tabular form for 2006 to 2026.

The Manitoba Bureau of Statistics has also developed a set of regional population projections that are compatible with the Manitoba level projections. These regional projections incorporate recent demographic information for the eight Economic Regions.

To obtain further information on this report, please contact Jacqueline Storen at (204) 945-2396.

NOTE: A CENSUS YEAR IS DEFINED AS JULY 1 TO JUNE 30

DATA SOURCE: STATISTICS CANADA, MANITOBA BUREAU OF STATISTICS

DECEMBER 2006

IV. MANITOBA PROJECTED POPULATION 2006-2026

Table 1 illustrates the projected population and components of population growth for Manitoba. Chart 1 illustrates the estimated and projected population levels for 1971 to 2026.

CHART 1. MANITOBA POPULATION AS OF JULY 1st
1971 - 2006 ESTIMATED AND 2007 - 2026 PROJECTED

Manitoba's population of 1,177,800 as of July 1, 2006 is projected to increase throughout the projection period to a figure of 1,441,000 by July 1, 2026 (an average annual increase of 1.0% or 13,200 persons). Between 2006 and 2017, the population is projected to grow, adding 112,300 persons in 11 years for average annual growth of 0.8% or 10,200 persons per year. From 2017 to 2026, the population is projected to grow but at a faster pace, from 1,290,400 in 2017 to 1,441,000 in 2026 for an average increase of 1.2% or 16,700 persons per year. Chart 2 shows the estimated and projected annual level change of the population.

CHART 2. MANITOBA POPULATION AS OF JULY 1st
ANNUAL LEVEL CHANGE
1972 - 2006 ESTIMATED AND 2007 - 2026 PROJECTED

A constant total fertility rate of 1.80 for Manitoba, coupled with a steady increase in the number of females of child bearing age will result in a steady increase in the number of births from 13,900 in 2006 to 16,700 by 2026.

The projected increase in life expectancy at birth for females and males will not entirely moderate the ageing of the population. The projected number of deaths will steadily increase from 10,500 to 12,900 by the year 2026. The natural increase of the population (births minus deaths) is expected to rise over the next 13 years, after which it will start to decline. It will increase from 3,500 in 2006 to 4,300 by 2019 and then decrease to a value of 3,800 for the last year of the projection period.

Net international migration is expected to increase steadily over the projection period. During the first ten years, this component is expected to grow by over 55%, from 8,600 in 2006 to 13,400 in 2017. By 2026 it is expected to reach 17,400, which is more than double the 2006 level. This strong growth is mainly due to the anticipated influx of international immigrants.

Net interprovincial migration is estimated to be -7,200 for 2005 and -8,600 for 2006. The estimated deficits recorded over the past two years are largely being driven by substantial net losses to Alberta. However, it is expected that over the projection period Manitoba will see a return of persons who left for Alberta. This expectation coupled with the ageing of the population (with lower propensity to migrate) is expected to slow net interprovincial migration to -3,500 by 2011. After which it will be constant for the remainder of the projection period.

Overall, total net migration is expected to steadily increase from 1,700 in 2006 to 14,800 in 2026.

Annual population gains for Manitoba will grow throughout the projection period from 5,200 in 2006 to 18,600 in 2026. However, as the population ages and the fertility rate remains at 1.80, the major factor driving population growth will be migration. It is projected that migration will account for nearly 80.0% of total population growth by the end of the projection period. This is a marked departure from years past (see chart 3) and reflects changes in international and interprovincial migration as well as the age structure of the population.

**CHART 3. COMPONENTS OF MANITOBA POPULATION CHANGE
1971 - 2005 ESTIMATED AND 2006 - 2026 PROJECTED**

The projected increase of the population is not uniform across all age groups. The number of people in the older age groups, fifty-five and over, is projected to grow much larger relative to

the younger age groups. For example, between 2006 and 2017, the number of fifty-five to sixty-four year olds will grow by 32.5% and the number sixty-five to seventy-four year-olds will grow by 44.4%. However the number of children aged zero to fourteen will only increase by 3.6% between 2006 and 2017.

Over the longer term, 2006 to 2026, it is projected that the number of seniors (65 years and over) will increase significantly. The number of sixty-five to seventy-four year-olds increasing by 83.2%, seventy-five to eighty-four year olds growing by 35.6% and those over eighty-five years old increasing by 18.9%. However, zero to fourteen year-olds are expected to make some gains, growing by 17.4% over the entire projection period.

As a result, the age distribution will change during the projection period with a decreased percentage of children and an increased percentage of seniors. The percentage of children (aged 0 - 14 years) is projected to decrease from 19.4% in 2006 to 18.6% in 2026 as the percentage of seniors (aged 65 and over) is projected to increase from 13.6% to 17.3%. While the number of children will increase from 228,000 in 2006 to 268,000 in 2026, the number of seniors will grow by 90,000 from 160,000 in 2006 to 250,000 in 2026. The number of very old (90 years and over) is also projected to rise, growing from 8,600 in 2006 to 12,100 by 2026, for an increase of 42.0% or an average annual increase of 1.8%.

The percentage of adults (aged 15 - 64) will decrease slightly, going from 67.1% in 2006 to 64.1% by 2026. Within the adult population, the age distribution will change over the course of the projection period. For the first fifteen years (2001 to 2015), the age categories spanning the years 45 to 54 will have the largest populations. However, after 2015, the age categories 30 to 39 will have the largest populations.

Chart four below shows the change in population by age group relative to 2006. Charts five and six on the following page show the population and the total share of the population by age group.

CHART 4: PROJECTED POPULATION INDEX BY AGE GROUP

CHART 5. POPULATION AS OF JULY 1ST BY AGE GROUP
1971 TO 2001 ESTIMATED AND 2006 TO 2026 PROJECTED

CHART 6. POPULATION AS OF JULY 1ST BY AGE GROUP: SHARE OF
TOTAL 1971 TO 2001 ESTIMATED AND 2006 TO 2026 PROJECTED

**CHART 5. POPULATION AS OF JULY 1ST BY AGE GROUP
1971 TO 2001 ESTIMATED AND 2006 TO 2026 PROJECTED**

**CHART 6. POPULATION AS OF JULY 1ST BY AGE GROUP: SHARE OF
TOTAL 1971 TO 2001 ESTIMATED AND 2006 TO 2026 PROJECTED**

An increase in the median age of the population is projected, from 37.3 years in 2006 to 38.6 years by 2026, for an increase of 1.3 years. The median age for females is projected to increase 0.9 years, from 38.5 in 2006 to 39.4 in 2026. The male median age is also projected to escalate from 36.2 in 2006 to 37.9 in 2026, for an increase of 1.7 years.

The number of females in the population is projected to increase from 592,400 in 2006 (50.3% of the total population) to 720,200 by 2026 (49.9%). However, their total share of the population is projected to decrease, particularly in the older age groups.

In 2006, women comprised 58.9% of the total population that is 70 years and older. By 2026, it is projected that women will comprise 56.2% of this age group. With respect to the age group 55-69, females accounted for nearly 51.0% of the population in 2006. In the last five years of the period it is projected that the proportion of males will start to increase and approach the female proportion (see chart 7 below). The increasing share of males in older population groups is a reflection of the assumption that the life expectancy for men will increase more rapidly than for women.

**CHART 7. POPULATION BY AGE GROUP:
FEMALES AS A PERCENTAGE OF MALES
1971 - 2006 ESTIMATED AND 2007 - 2026 PROJECTED**

The changing age structure of the population can also be seen in the Manitoba individual age pyramid. Between 2006 and 2026, the largest increase will occur in the older age categories (see chart 8).

1971 - 2005 ESTIMATED AND 2006 - 2026 PROJECTED

MANITOBA BUREAU OF STATISTICS

DECEMBER 2006

V. PROJECTED POPULATION COMPONENTS

This section provides historical and projected data on the four population components:

- fertility
- international migration
- interprovincial migration
- mortality

i) FERTILITY

The fertility assumption is expressed as the total fertility rate¹, the expected number of births per woman during the period 15 – 49 years of age.

Table 2 shows the estimated and projected total fertility rates (TFR) for Manitoba on a quinquennial basis from 1971 to 2026.

The total fertility rate holds steady at 1.8 for the entire 20-year period. Since Manitoba's current fertility rate of 1.8 is notably higher than the national average of 1.5 and has been more or less at this level for the past few years, it is assumed that Manitoba's rate will remain constant over the projection period.

TABLE 2: MANITOBA TOTAL FERTILITY RATE

	<u>ACTUAL</u>			<u>PROJECTED</u>
<u>1986</u>	<u>1991</u>	<u>1996</u>	<u>2001</u>	<u>2006-2026</u>
1.82	1.97	1.89	1.80	1.80

The number of births in Manitoba is projected steadily increase throughout the projection period, from 13,900 in 2006 to 16,700 by 2026. A sharp increase is expected to occur in the first ten years of the period, after which the number of births rise at a slower pace. This growth is due to the constant total fertility rate of 1.80 coupled with a steady increase in the number of females in the child bearing ages.

¹The **total fertility rate** is defined as the sum of the female age-specific fertility rates multiplied by 5 where the age-specific fertility rate is the birth rate per woman in the respective 5 year age period from 15 - 49 years of age.

MANITOBA BUREAU OF STATISTICS

* Includes Returning Emigrants and Net Non-Permanent Residents
less Net Temporary Emigrants.

DECEMBER 2006

ii) INTERNATIONAL MIGRATION

Table 3 shows the international migration components for Manitoba during the period 1995/96 to 2005/06. The projected components to 2026 are shown Table 4. This information is also presented in Chart 10.

For the purpose of these projections, three components of international immigration were considered; Provincial Nominees, other international immigrants not part of the Provincial Nominee Program and the "other" category which is composed of non-permanent residents and returning Canadians less those that are temporarily abroad.

The immigration component is considerably more volatile than the emigration component. For example, since 1999 the number of international immigrants on an annual basis has grown considerably. Through the Canada Manitoba Immigration Agreement (CMIA), Manitoba has secured a greater role in increasing the provincial immigration intake as reflected in the Manitoba Provincial Nominee Program. The program has grown from 1,357 in 2001/02 to 5,542 persons in 2005/06.

TABLE 3: INTERNATIONAL MIGRATION COMPONENTS: MANITOBA

	<u>Provincial Nominees</u>	<u>Non- Provincial Nominees</u>	<u>Immigration</u>	<u>Other*</u>	<u>Emigration</u>	<u>Net Migration</u>
	(1)	(2)	(1)+(2)			
1995/96	-	3,666	3,666	-112	1,352	2,202
1996/97	-	4,030	4,030	38	1,853	2,215
1997/98	-	3,093	3,093	261	1,765	1,589
1998/99	-	3,293	3,293	756	1,731	2,318
1999/00	-	4,207	4,207	849	1,633	3,423
2000/01	-	4,834	4,834	733	1,604	3,963
2001/02	1,357	3,468	4,825	1,033	1,241	4,617
2002/03	2,026	2,883	4,909	1,637	1,269	5,277
2003/04	3,655	3,762	7,417	1,033	1,347	7,103
2004/05	4,426	3,260	7,686	806	1,360	7,132
2005/06	5,542	3,342	8,884	1,049	1,370	8,563
Average	3,401	3,622	5,168	735	1,502	4,400

Immigration is projected to increase steadily over the entire projection period, from 8,884 in 2005/06 to 19,000 in 2025/26. This steady growth reflects the anticipated increase in international immigrants, particularly the Provincial Nominee Program where most of the growth is expected.

The emigration level is projected to increase from 1,370 in 2005/06 to a level of 1,600 by the year 2009/10, and then remain constant.

The Other category is projected to remain constant at 900 persons per year.

Overall, total net migration is projected to be 18,300 by 2025/26. This level will be attained by increasing the number of immigrants by 1,000 every two years for the entire projection period.

However, it should be noted that for the first three years, the number of immigrants will stay at 10,000 before rising.

TABLE 4: PROJECTED INTERNATIONAL MIGRATION:

	<u>Provincial Nominees</u>	<u>Non- Provincial Nominees</u>	<u>Immigration</u>	<u>Other</u>	<u>Total Emigration</u>	<u>Net Migration</u>

2023/24	12,600	5,400	18,000	900	1,600	17,300
2024/25	12,600	5,400	18,000	900	1,600	17,300
2025/26	13,300	5,700	19,000	900	1,600	18,300

**"Other" includes Non-Permanent Residents and Returning Canadians less those Canadians that are temporarily abroad.

iii) INTERPROVINCIAL MIGRATION

Interprovincial migration is a volatile component of population growth and can have significant impact on the year-to-year change in Manitoba's population.

Table 5 presents the interprovincial migration components from 1995/96 to 2005/06. During the period from 1971/72 to 2005/06, net interprovincial migration has ranged from -13,884 in 1979 to 2,292 in 1982 with the average for the last 35 years being -5,131. However for the last ten years the average annual net loss has been -4,568 persons.

TABLE 5: MANITOBA INTERPROVINCIAL MIGRATION COMPONENTS

	<u>In</u>	<u>Out</u>	<u>Net</u>
1995/96	15,075	18,641	-3,566
1996/97	13,883	19,756	-5,873
1997/98	14,906	20,182	-5,276
1998/99	13,985	16,098	-2,113
1999/00	14,075	17,531	-3,456
2000/01	12,623	16,946	-4,323
2001/02	13,960	18,304	-4,344
2002/03	13,707	16,582	-2,875
2003/04	13,301	15,866	-2,565
2004/05	12,180	19,407	-7,227
2005/06	14,215	22,850	-8,635
Average	13,810	18,378	-4,568

Currently, Manitoba's net loss is mainly being driven by Alberta's strong economy. However, it is expected that these losses to Alberta will not continue indefinitely but taper off over time. In addition, there is also concern that Statistics Canada's net interprovincial migration losses for Manitoba are overstated and do not reflect the dynamic nature of our interprovincial movements.

Based on the above information coupled with an ageing population (less propensity to migrate), the assumption for annual net interprovincial migration was moderated to -3,500 by 2011 (see Table 6 and Chart 11 on the following page).

TABLE 6: PROJECTED INTERPROVINCIAL MIGRATION

	<u>In</u>	<u>Out</u>	<u>Net</u>
2005/06	14,215	22,850	-8,635
2006/07	14,346	22,125	-7,779
2007/08	14,477	21,400	-6,923
2008/09	14,608	20,675	-6,068
2009/10	14,738	19,950	-5,212
2010/11	14,869	19,225	-4,356
2011/12	15,000	18,500	-3,500
2025/26	15,000	18,500	-3,500

**CHART 11: INTERPROVINCIAL MIGRATION
MANITOBA
1971 - 2005 ESTIMATED AND 2006 - 2026 PROJECTED**

MANITOBA BUREAU OF STATISTICS

DECEMBER 2006

iv) MORTALITY

The assumption for mortality is expressed as the life expectancy at birth, which is calculated from life survival tables for Manitoba. Table 7 and Chart 12 show the Manitoba life expectancy at birth for females and males on a quinquennial basis.

It is projected that the life expectancy for Manitoba females will increase 0.9 years during the projection period, from a figure of 81.1 years in 2001 to 82.0 years by 2026. For the same time period, the life expectancy for males is projected to increase by 1.8 years from 75.2 to 77.0 years by 2026.

TABLE 7: LIFE EXPECTANCY AT BIRTH: MANITOBA

	ACTUAL							PROJECTED	
	<u>1971</u>	<u>1976</u>	<u>1981</u>	<u>1986</u>	<u>1991</u>	<u>1996</u>	<u>2001</u>	<u>2016</u>	<u>2026</u>
Females	76.9	77.9	78.7	80.0	80.7	80.7	81.1	81.6	82.0
Males	70.2	70.7	72.1	73.4	74.6	75.4	75.2	76.3	77.0
Female-Male Difference	6.7	7.2	6.6	6.6	6.1	5.5	5.9	5.3	5.6

The effect of the ageing population on the number of deaths will be moderated by the projected increase in the life expectancy at birth but will still result in an increased annual number of deaths. The number of deaths is projected to increase by 21.0%, from the 2006 value of 10,200 to 12,900 over the next 20 years.
